

Mission Statement of the AIT Program

A commitment to provide the student with a knowledge of the physical sciences, mathematics, engineering and computer science; to enable the student to have the capability to apply those principles within the aeronautical and industrial technology sectors. To familiarize the student with a systematic scientific approach towards identification and solution of practical problems encountered in the working environment; to guide the student in determining the most effective and organized ways to use basic factors of production, people, machines, materials information, and energy in the making or processing of a product; and to assist the student in developing managerial skills. To support and enhance ethical character, integrity, and professional attitudes; and to instill the importance of a cognizance of the individual's affect and effect in society-at-large-from both a national and an international perspective.
