MAJOR: COMPUTER SCIENCE

DEGREE: MASTER OF SCIENCE (M.S.)

CONCENTRATIONS:
HIGH-PERFORMANCE COMPUTING & BIOINFORMATICS
CYBER-SECURITY & NETWORKING

The Department of Computer Science offers a Master of Science degree in Computer Science. The M.S. in Computer Science program provides recent college graduates, or college graduates who have had several years of professional life, an opportunity to enhance their careers and work on cutting-edge areas of computer science. The program offers two concentrations: (1) high-performance computing and bioinformatics, and (2) cyber-security and networking.

The M.S. in Computer Science offers the non-thesis and thesis options. All students are required to complete a total of 33 credit hours that include 9 credit hours of major core courses, 12 credit hours of concentration core courses, 6 credit hours of electives, and 6 credits hours of design-based courses (for non-thesis option) or 6 credit hours of thesis (for thesis option).

Substitution within the core courses may be permitted with the consent of the advisor and approval of the department chair.

Admission Requirements

All students desiring to enroll for graduate study must apply through the Office of the Dean of Graduate Studies and Research. To be admitted to the program, students should demonstrate readiness to succeed in the graduate program. To do this, students should meet the following criteria:

1. Applicants must have an academic background that covers certain prerequisite knowledge in mathematics, software systems and computer programming, data structures, computer architectures, and computer networks. Student transcript should present evidence of the following courses with a grade of “C” or better:
   a. Mathematical background: 8 credit hours of calculus and 3 credit hours of linear algebra.
   b. Completion of undergraduate computer science prerequisites courses (or their equivalents): COMP 2240 (Computer Programming II), COMP 2400 (Computer Organization), COMP 3040 (Data Structures), COMP 3310 (Data Communications and Computer Networks), and COMP 4100 (Operating Systems).
2. The applicant must have a Bachelor’s degree in Computer Science or a related area with a minimum cumulative grade point average (GPA) of 2.75 on a 4.0 scale.
3. The applicant must submit two letters of recommendation.

The application materials of each applicant will be evaluated by a committee, which may recommend some prerequisite undergraduate courses for the applicants under conditional admission. The applicant will have conditional classification until the completion of the recommend course or courses. If admitted the applicant must correct the deficiency within the first two semesters.

An applicant whose Bachelor's degree is not in Computer Science or a related area and who has exceptional experience in Computer Science may also be considered for conditional admission on an individual basis. Such applicants must have a minimum GPA of 2.75 and provide a written technical summary for evaluation of their technical experience. This summary should emphasize the applicant’s experience with software systems and methodology, computer organization and architecture, and theory and mathematical background.

Conditional admission: Applicants admitted in this category will not be allowed to take more than 6 credits hours of graduate courses in the program until successful completion of the prerequisite courses with grade C or above.
Non-Thesis and Thesis Options

The proposed program requires completion of either a 6-credit hour thesis, for the thesis option, or 6 credit hours of design-based courses, for the non-thesis option. For the thesis option, a thesis manuscript and an oral presentation are required to document the student’s research activity. A thesis committee will supervise the student’s thesis work. The committee will consist of 3 faculty members, including the thesis chair. At least 2 of the committee members must be computer science graduate faculty. The chair must be a computer science faculty with graduate faculty credentials. For the non-thesis option, 6 credit hours of design-based courses are required. These courses will be selected from an approved list with advisement of the student’s advisor. These courses have a strong project/design component.

Retention Requirements

The following is a list of the retention requirements:
1. Students are required to maintain a cumulative GPA of 3.00 throughout the program. After completion of nine semester hours of graduate work, if the student’s cumulative GPA at the end of the given semester falls below 3.00, the student will be placed on probation. A student who fails to attain a cumulative GPA of 3.00 during the next semester enrolled will be suspended.
2. Students must have a grade of B or better in all core courses and may not have more than two C grades in other courses used to meet degree requirements.
3. Students who have repeated a core course and failed to achieve a grade B or higher will be dismissed from the program.
4. The maximum time allowed for completion of the master’s degree is six calendar years. All requirements for the M.S. in CS degree must be completed within the six-year period beginning with the student’s first term of enrollment in a graduate course.
5. Students dismissed from the program will not be readmitted.

Graduation Requirements

The M.S. in Computer Science program has two tracks: (a) a non-thesis program that requires 33 hours of coursework or (b) the thesis program that requires completion 27 hours of coursework and a thesis. The thesis option is strongly recommended for the students who intend to pursue a doctoral degree. The Master of Science degree in Computer Science will require the following:

1. Admission of all degree-seeking students to candidacy for the degree after the completion of nine (9) graduate credit hours in residence at the University. The student must file an Admission to Candidacy form with the Graduate School prior to the semester in which graduation is desired.
2. A minimum of 33 credit hours of graduate work, including 18 credit hours of required graduate core courses, with the following conditions for the Non-Thesis Option and Thesis Option:

   **Non-thesis Option:**
   The student must complete 33 credit hours of graduate computer science coursework.

   **Thesis Option:**
   The student must complete 27 credit hours of graduate computer science coursework and 6 credit hours of thesis work. A thesis is documented by a report and an oral presentation is required. A thesis committee will supervise the student’s thesis work. The committee will consist of 3 faculty members including the thesis chair. At least 2 of the committee members must be computer science graduate faculty. The chair must be computer science faculty.

COURSE DESCRIPTIONS

COMPUTER SCIENCE

COMP 5100 SOFTWARE ENGINEERING. (3) This course focuses on foundational concepts of software engineering including software processes and life-cycle models, software requirements and specifications, software design methodologies, software testing, maintenance, and cost analysis. Prerequisite: None.
COMP 5200 ADVANCED ALGORITHMS DESIGN AND ANALYSIS. (3) Analysis and design of advanced algorithms and data structures in many areas of computing including divide and conquer, dynamic programming, greedy technique, graph algorithms, pattern matching, geometric algorithm, P and NP, and efficient approximation algorithms. Prerequisite: COMP 3040 and COMP 3200 or Equivalent.

COMP 5300 ADVANCED COMPUTER ARCHITECTURES. (3) This course introduces advanced computer architectures. It focuses on selecting and interconnecting hardware components to create a computer that meets functional, performance and cost goals, and teaches the qualitative and quantitative examination of computer design tradeoffs. It covers the system architecture, processor technology, advanced memory hierarchy and I/O organization, power and energy management, and reliability, and it further covers the new development in multicore, data center design, and parallel I/O. Prerequisite: COMP 2400 or Equivalent.

COMP 5400 HYBRID AND RELATIONAL DATABASES. (3) This course presents relational, object-oriented, and hybrid database concepts. Topics include: definitions of objects and attributes, methods and messages, classes, object-oriented data models, architectural issues, the object-oriented database system manifesto, object-oriented database design, object-oriented database management systems, and object/relational database management systems. Prerequisite: None.

COMP 5440 MOBILE ROBOTICS. (3) This course provides students with hands-on experience in mobile robot design, implementation, and testing. It covers mobile robot topics such as robot hardware, robot sensing, actuation, embedded system programming, and algorithms for localization, path planning, and mapping. It briefly covers multi-robot systems. Students are expected to work in laboratory in teams to build and test increasingly complex mobile robots and compete in an end-of-semester robot contest. Prerequisite: COMP 5100.

COMP 5520 INTRODUCTION TO HIGH PERFORMANCE COMPUTING. (3) This course focuses on concepts of distributed system, concurrency control, files system, resource management in shared/distributed memory, and high-performance computing in different computing systems. The topics include computing in multiple-core computer, GPU, computer cluster, parallel computer, and synchronous/asynchronous computer networks. The problems of consensus, communication, resource allocation, synchronization, link/process failures in synchronous/asynchronous networks will also be discussed. Prerequisite: COMP 5200.

COMP 5600 MOBILE APPLICATIONS DEVELOPMENT. (3) This course provides comprehensive understanding of the principles of application design, implementation, and testing for mobile platforms (e.g. cell phones). Memory management, user interface design and implementation, data handling, networking, GPS and motion-based sensing are among the topics covered. Students are expected to work in teams to build and test increasingly complex mobile phone applications and compete in an end-of-semester contest. Prerequisite: COMP 5100.

COMP 5700 FUNDAMENTALS OF COMPUTER NETWORKS. (3) This course provides fundamental design principles of ATM, Internet and local area networks; protocol layers and the Internet Architecture; medium access protocols; application protocols and TCP/IP utilities; basic principles and virtual circuit switching; naming and addressing; flow and congestion control protocols; routing algorithms; Quality-of-Service in computer networks; security issues in networks. Prerequisite: COMP 5100.

COMP 5720 CRYPTOGRAPHY AND COMPUTER SECURITY. (3) This course introduces modern cryptography, focusing on the fundamental concepts of secure computation and communication in the distrustful environments, for instance, wireless networks, internet banking, satellite radio and more. The course uses an incremental approach. It starts with the mathematics background of cryptography. Then, it will discuss attack and threaten models and security goals and review the traditional cryptography. The course will mainly investigate the techniques of modern cryptography in design of private and public key encryption schemes, digital signatures, authentication and key management. Applications in network security will be discussed. Prerequisite: ENGR 5100 and COMP 5700 or Equivalent.

COMP 5750 COMPUTER NETWORK MANAGEMENT AND SECURITY. (3) This course presents various concepts of computer network management and tools. Topics include: Network interfacing, measuring failures and availability, reliability, security, maintenance, network statistics, reconfiguration and documentation. Prerequisites: COMP 5700 or Equivalent.

COMP 5800 INTRODUCTION TO BIOINFORMATICS. (3) Bioinformatics is an interdisciplinary field in which biology and computer science merge. This course is designed to introduce students with concepts, methods and tools to analyze biological problems, prepare students with skills necessary to communicate across the fields of computer science and biology. Topics include (but not limited to) biological sequence and literature databases, strategies to search these databases to solve fundamental biological problems, principle and algorithms used for processing and analyzing biological information.

COMP 5900 SPECIAL TOPICS. (3) This course is for teaching important emerging computer science topics that are not covered in other computer science courses. Prerequisites: successful completion of at least 9 hours of COMP graduate courses.

COMP 5910 MASTER OF SCIENCE THESIS I. (3) Thesis topics to be selected in consultation with the chairman of thesis committee and approval of the department head. Students in specific concentration are required to work on thesis work in their corresponding concentration areas. Other students may complete a thesis work in other state-of-the-art areas of computer science. Prerequisite: Completion of at least 18 credits of graduate coursework.
COMP 5920 MASTER OF SCIENCE THESIS II. (3) Continuation and completion of thesis and oral presentation defense. Prerequisite: COMP 5910.

COMP 6100 BIOINFORMATICS AND COMPUTATIONAL BIOLOGY. (3) This course is designed to introduce students with basic concepts, methods and tools to analyze biological information, algorithm design and programming skills for biology computing, and prepare students with knowledge and skills necessary to communicate and solve the problem across the fields of biology and computer science. Topics include fundamental knowledge of biology and bioinformatics, literature databases and tools for analysis and visualization, algorithm design, bioinformatics-oriented programming, and HPC of bioinformatics. Prerequisite: COMP 5800.

COMP 6200 MACHINE LEARNING. (3) This course provides a broad introduction to machine learning, data mining, and statistical pattern recognition. Topics include: (i) Supervised learning (parametric/non-parametric algorithms, support vector machines, kernels, neural networks). (ii) Unsupervised learning (clustering, dimensionality reduction, recommender systems, deep learning). (iii) Best practices in machine learning (bias/variance theory; innovation process in machine learning and AI). The course will also draw from numerous case studies and applications, so that you’ll also learn how to apply learning algorithms to building smart robots (perception, control), text understanding (web search, anti-spam), computer vision, medical informatics, audio, database mining, and other areas. Prerequisite: ENGR 5100 or Equivalent.

COMP 6280 ADVANCED WEB APPLICATIONS DEVELOPMENT. (3) This course provides a comprehensive overview of web-based software architectures (e.g. JSP, ASP, Servlets, Web Services) and their applications. Students are expected to work in teams on a medium-scale web application development. Prerequisite: COMP 5400.

COMP 6300 ADVANCED SOFTWARE ENGINEERING. (3) This course explores software engineering topics including software reuse, component-based software engineering, distributed software engineering, service-oriented architectures, embedded software development, aspect-oriented software engineering, advanced validation and verification methods, and configuration management. Prerequisite: COMP 5100.

COMP 6800 INTRODUCTION TO COMPUTER VISION. (3) This course introduces the concepts and applications in computer vision. Topics include: cameras and projection models, low-level image processing methods such as filtering and edge detection; mid-level vision topics such as segmentation and clustering; shape reconstruction from stereo, as well as high-level vision tasks such as object recognition, scene recognition, face detection and human motion categorization. Prerequisite: ENGR 5100 or Equivalent.

COMP 6900 EMBEDDED SYSTEMS PROGRAMMING. (3) In this project-based course, students will design and develop an application for an embedded systems platform, and then investigate low-level performance tuning and optimization. This course incorporates topics from the domains of software engineering, compilers, operating systems, and computer architecture, and provides students with the foundation they will need for addressing the concerns of developing real-world embedded systems. Prerequisite: C or Java Programming.
