

Fertilizer Amounts per plant, by size and type; when sidedressing **27-4-10** by hand in circles.
Apply late Feb. and late June.

For all recent transplants, all shrubs, all conifers, dogwood and all *Malus* and *Pyrus*; with 50 pounds of actual Nitrogen per acre.*

For Shade trees after their first sidedressing;
with 75 pounds of actual Nitrogen per acre

1.5t	1T .5t	2T	3T 1t	4T 2t
-------------	---------------	-----------	--------------	--------------

* *Malus* & *Pyrus* should receive the lower rate each spring to reduce likelihood of fireblight.
Measure the amounts out one time. Find a cup or cut a paper or plastic cup to fit each amount.
Radius is distance from stem to edge of circle. T = Tablespoon t = teaspoon
