Major:
Sr. Physics

Research Advisor(s):
Dr. Lizhi Ouyang

Current Research:

Long-term goals: (Future career)

I would really love to do research in nanolithography. I also would love to become a successful teacher on the high school level. I hope to be an inspiration to my students as my teachers have been to me. I believe teaching is two sided, the growth and the development of our youths minds is very important to our current discoveries meaning anything and teaching is learning with a fresh pair of eyes, you can always renew your outlook on the subject.

Personal interests:

I personally love to travel and explore different cultures. I think traveling and not only going there but being actively involved with the culture is vital to ones growth and ability to understand this world. I love learning the more knowledge the better.

Nano-Bio Core Research Goals:

I would like to gain a stronger understanding of the powers interdisciplinary networking. How it is import not to just know what you are working on but how it affects the students down the hall or the workers in the next department. I believe it is a vital lesson to be learned. I also would like to learn about nanoparticles and its many real life applications
