Major:
Biology

Research Advisor(s):
Dr. Margaret W. Whalen

Current Research:
Effect of Organotin compounds on NK cells function. Also, effect of DBT, TBT, TPT on the levels of MAPK, PTK, MEKs in the natural killer cells. Also the effect of Organotin compounds on the level of the caspases in the NK cells.

Long-term goals: (Future career)
Work in health care research (immunology, toxicology, cancer research) specially clinical research and teaching .

Nano-Bio Core Research Goals:
gain more knowledge, learn how to operate new scientific instruments and use them in my research
