

SITES-M Mathematics Challenge

Everyday Patterns

Level: Kindergarten

Standard: Algebra

Learning Target: Focus on Patterns

Checks for Understanding

0006.3.2

Name, copy, and extend patterns.

0006.3.3

Translate simple patterns into rules.

0006.3.4

Sort, order, and classify objects by attribute and identify objects that do not belong in a particular group.

SITES-M Mathematics Challenge
 Grade K–Focus on Patterns
 Everyday Patterns

The purpose of the Mathematics Challenges is to provide opportunities for students to develop and demonstrate understanding of important mathematical concepts and standards. Each Challenge includes a set of tasks that require higher-order thinking skills. Because these types of tasks may be new for students and they will have varying levels of understanding, the student responses will vary. The Challenges and guiding questions were designed to help teachers plan their implementation and elicit, analyze, and act on evidence of student understanding.

You will be able to choose which Mathematics Challenge Packet to implement each month, according to the learning needs of your students and your teaching context. Each packet contains all the materials necessary to implement the Mathematics Challenge including a grade-appropriate Challenge, the Mathematics Challenge Meeting Protocol, and the Guiding Questions for Analyzing Student Responses to Mathematics Challenges.

For each Challenge, you will complete a six step process of planning, implementation, and analysis and reflection.

The Mathematics Challenge Process

Stage	Step	Task
Planning	Step 1.	Review the Mathematics Challenge Meeting Protocol
	Step 2.	Review and solve the Mathematics Challenge prior to your Professional Learning Community (PLC) meeting. Think about your responses to the guiding questions on the Meeting Protocol
	Step 3.	Hold your PLC meeting and discuss your responses to the Guiding Questions on the Meeting Protocol
Implementation	Step 4.	Implement the Mathematics Challenge with your class
Analysis and Reflection	Step 5.	For your own planning and documentation, respond to the Guiding Questions on the Analyzing Student Responses Protocol
	Step 6.	To help us improve the Challenges and to provide recommendations for teachers implementing them in future years, complete the Mathematics Challenge Feedback Log and provide copies of all student work to the Assessment Coordinator

Grade K–Focus on Patterns
Everyday Patterns

Mathematics Challenge Meeting Protocol

Each month, your Professional Learning Community will meet to discuss the implementation of one Mathematics Challenge. In preparation for your monthly meeting, please print and review this month's Mathematics Challenge, solve all tasks within the Challenge, and think about the guiding questions below. These questions will be used to facilitate a group discussion regarding the implementation of the upcoming Mathematics Challenge.

Guiding Questions for Implementing the Mathematics Challenges

1. What is the title of the Challenge that you will use this month?
2. What skills or standards is this Challenge measuring?
3. Where does this Challenge fit within your curriculum? Within which unit?
4. At what point during the unit will you administer this Challenge (e.g., At the beginning of a unit to determine what students do or do not know, at the end of a unit to assess what students have or have not learned, in the middle of a unit to determine where to go next instructionally)?
5. How will your students complete this Challenge (e.g., individually, one-on-one, in small groups, as a class)? Why?
6. Are there any prerequisite skills, common misunderstandings, or vocabulary needs that you will have to address? What are they?
7. What difficulties do you anticipate your students will have with the Challenge? How will you address them?
8. Are these skills and difficulties different for special needs students, ELL students, etc.? How? Will you do anything different for these students? What?
9. How will you evaluate student responses (e.g., grade responses with the provided rubric, scan responses to identify common mistakes/misconceptions, have students evaluate one another's responses, have students evaluate their own response)?
10. What will student responses to this Challenge tell you about student understanding?
11. How might you use this evidence of student understanding to adapt your teaching and learning?
12. What other materials, resources, or support might you need? Where can you get them?
13. How can your colleagues assist you in the analysis of student understanding?
14. What other questions or concerns do you have about this Mathematics Challenge?

After you have implemented the challenge with your class, be sure to respond to the Guiding Questions on the Analyzing Student Responses Protocol.

SITES-M Mathematics Challenge
Grade K–Focus on Patterns

Standard: Algebra

Learning Target: Focus on Patterns

Claims:

Students should understand and be able to explain or demonstrate how to:

- ✓ Sort, order, and classify objects by attribute and identify objects that do not belong in a particular group;
- ✓ Name, copy, and extend patterns;
- ✓ Translate simple patterns into rules.

Task Preparation:

Each student will need a copy of the Student Response Sheet and a pencil.

Stimulus Cards (Drawing or Word Description):

None

Manipulatives/Supplies:

Pencils

SITES-M Mathematics Challenge
Grade K–Focus on Patterns

Cues/Directions:

Distribute student response sheets. If a student is unable to respond in writing, a scribe may be appointed or verbal answers may be accepted, but these responses will need to be documented for scoring. Students should be directed to look carefully at each figure. Allow students time to answer.

Instruct students to follow along as you read aloud and say: **Patterns can be used in different ways at the grocery store. Let's look at some of those ways.**

1. Say: **The group of things below are found in the same place at the grocery store. (TEACHER NOTE: Have students look at the group of fruits.) Circle each thing below that is also a part of that group. (TEACHER NOTE: Students should circle the correct things.) How are all things in the group alike? (TEACHER NOTE: Students should write their explanations in the box.)**
2. **Look at the things below. Circle 3 things that could go together in one group. (TEACHER NOTE: Students should circle 3 things.) Look at the things you circled. How are they alike? (TEACHER NOTE: Students should write their explanations in the box.) Now look at the things you did NOT circle. How are they alike? (TEACHER NOTE: Students should write their explanations in the box.)**
3. **Look below at the pattern of fruit. (TEACHER NOTE: Have students look at the pattern of fruit.) Circle the fruit that goes on the line above to complete the pattern. (TEACHER NOTE: Students should circle the correct fruit.) Circle the rule that describes the pattern of the fruit. (TEACHER NOTE: Students should circle the correct pattern.)**
4. **Look below at the pattern of shapes. (TEACHER NOTE: Have students look at the pattern of shapes.) Draw the shape on the line above that completes the pattern. (TEACHER NOTE: Students should draw the correct shape on the line above.) Circle the rule that describes the pattern of shapes. (TEACHER NOTE: Students should circle the correct pattern.)**
5. **Each pencil costs 2 cents. Complete the table below. (TEACHER NOTE: Students should fill in the blanks in the table.) How much do 8 pencils cost? Show how you get your answer. (TEACHER NOTE: Students should show their work or explain their answer in the box, and write the amount that 8 pencils cost in the blank at the bottom of the page.)**

SITES-M Mathematics Challenge
Grade K—Focus on Patterns

6. **(TEACHER NOTE:** This task may be a stretch for some students. If you feel it is beyond the scope of your class, you may omit it, use it as enrichment, or use it as a whole-class or small-group activity.)

Look below at the pattern of big and small rectangles. (TEACHER NOTE: Have students look at the pattern of rectangles.) **Ben says there will be more small rectangles in Row 5 than big rectangles. Is Ben correct? Check one of the boxes. (TEACHER NOTE:** Students should check the correct box.) **How do you know? (TEACHER NOTE:** Students should write their explanations in the box.)

Learning and Teaching Considerations

Task 1:

- A) Be sure that students are able to identify “apple” and “peach” as belonging with the other fruits or things that you eat.
- B) If a student says or writes, “I just know,” prompt him or her by saying something like “I’m glad you know, but it’s important in math to be able to explain your answers so other people can understand what you’re thinking.”
- C) If a student says or writes, “I don’t know,” say something positive like “Let’s start with what you do know about this problem.” Students often know more than they think or say, and encouraging them to vocalize or write about that knowledge is all they may need.

Task 2:

- A) Be sure that students are able to group the items you eat with those you don’t.
- B) Students may also recognize the items you eat as items you cook with and may recognize the items you don’t eat as items you use in school. Be open to other explanations, such as things in the refrigerator or backpack, for example.

Task 3:

- A) Be sure that students understand the concept of a repeating pattern and how a pattern is extended or continued.
- B) Be sure that students understand that the core of the repeating pattern is the shortest string of elements that repeats. The teacher could use actual fruit or manipulatives such as pattern blocks or colored tiles to create a pattern, show two iterations of the pattern, and then ask students to use the fruit or pattern blocks, for example, to show how to continue the pattern and explain their thinking.
- C) Students may have the misconception that the core of the repeating pattern is shorter or longer than the shortest string of elements that repeats. If this happens, ask them to convince you and the class that their pattern will always work
- D) Students may have the misconception that the pattern does not continue after one or two iterations. Be sure students understand that patterns are continuous and go on infinitely.

SITES-M Mathematics Challenge
Grade K—Focus on Patterns

Task 4:

- A) Students may have the misconception that the core of the repeating pattern is shorter or longer than the shortest string of elements that repeat. If this happens, ask them to convince you and the class that their pattern will always work
- B) Students may have the misconception that the pattern does not continue after one or two iterations. Be sure students understand that patterns are continuous and go on infinitely.

Task 5:

- A) Be sure that students understand that the number patterns found in number sequences are based on a particular rule.
- B) Be sure that students understand that a rule is something that will always work. For example, the student might notice a recursive pattern in which the previous number is operated on to get the next number.
- C) Students may have the misconception that the core of the repeating pattern is shorter or longer than the shortest string of elements that repeat.
- D) Students may answer in words, symbols (such as the addition symbol), numbers, or by using manipulatives. They may also use number lines or charts. Be sure they understand that they can get the correct answer using any of these strategies. The teacher can also encourage them to link these strategies and/or representations to each other as a way to provide a convincing solution.
- E) Students may describe even numbers.
- F) Students may add 2 to the previous number each time to get the next number.
- G) Be sure that students understand that the number pattern appears in that order and the numbers cannot be reversed or switched.

Task 6:

- A) Students may add 1 small rectangle and 1 big rectangle to row 4.
- B) Students may recognize that there are more small rectangles than big rectangles in each of the rows.
- C) Students may answer that 2 new rectangles won't visually fit in row 5 and provide that reason.

Grade K—Focus on Patterns

Name: ANSWER KEY

Date: _____

Patterns can be used in different ways at the grocery store. Let's look at some of those ways.

1. The group of things below are found in the same place at the grocery store.

Circle each thing below that also is a part of that group.

How are all things in the group alike?

THEY ARE FRUITS,
OR THINGS YOU EAT.
ANSWERS MAY VARY.

SITES-M Mathematics Challenge
Grade K—Focus on Patterns

2. Look at the things below. Circle 3 things that could go together in one group.

pencil

ruler

book

NOTE: ANSWERS MAY VARY.

STUDENT MIGHT CIRCLE

PENCIL, RULER, BOOK

SITES-M Mathematics Challenge
Grade K—Focus on Patterns

Look at the things you circled. How are they alike?

MILK, EGGS, CHEESE : THINGS YOU
EAT, OR DAIRY PRODUCTS
OR FOOD IN REFRIGERATOR

ANSWERS MAY VARY.

↑ MAY BE REVERSED
↓ DEPENDING ON WHAT WAS
CIRCLED.

Now look at the things you did NOT circle. How are they alike?

PENCIL, RULER, BOOK :
THINGS FOR SCHOOL
OR THINGS IN MY BACKPACK
OR THINGS YOU DON'T EAT

ANSWERS MAY VARY.

SITES-M Mathematics Challenge
Grade K—Focus on Patterns

3. Look below at the pattern of fruit.

Circle the fruit that goes on the line above to complete the pattern.

Circle one:

Circle the rule that describes the pattern of fruit.

SITES-M Mathematics Challenge
Grade K—Focus on Patterns

4. Look below at the pattern of shapes.

Draw the shape on the line above that completes the pattern.

Circle the rule that describes the pattern of shapes.

SITES-M Mathematics Challenge
Grade K–Focus on Patterns

5. Each pencil costs 2 cents. Complete the table below.

Number of Pencils	Cost
	2 cents
	4 cents
	6 cents
	<u>8</u> cents
	<u>10</u> cents

How much do 8 pencils cost?

Show how you get your answer.

1	2	} COUNT BY 2'S	OR $2 \times 8 = 16$
2	4		
3	6		
4	8		
5	10		
6	12		
7	14		
8	16		

8 pencils cost 16 cents.

SITES-M Mathematics Challenge
Grade K–Focus on Patterns

6. Look below at the pattern of big and small rectangles.

Ben says there will be more small rectangles in Row 5 than big rectangles. Is Ben correct?

Check one: Yes No

How do you know?

EACH ROW HAS 1 MORE BIG AND 1 MORE SMALL THAN THE ROW BEFORE, SO ROW 5 HAS 5 BIG AND 4 SMALL RECTANGLES AND 4 IS LESS THAN 5.
OTHER REASONS COULD BE CORRECT.

Scoring Notes Checklist

Task	Check Yes	Category
Task 1		
Identifies apple and peach as belonging with the other fruits.		Concept
Explains that the things in the box are fruits or things you eat, and that an apple and a peach are also fruits or things you eat.		Explanation
Circles apple and peach and nothing else.		Accuracy
Task 2		
Groups the items you eat with those you don't.		Concept
There may be different explanations that are acceptable, depending on what is and is not circled. The most obvious should be explaining that one group is things you eat (or dairy products, or things in the refrigerator), and the other group is things you don't eat (or school supplies, or stuff in the backpack).		Explanation
Task 3		
Identifies the correct pattern of apple apple banana.		Concept
May show evidence of indicating the correct grouping in the original sequence by circling, counting, marking, etc.		Strategy
Circles the banana and chooses only choice c.		Accuracy
Task 4		
Identifies the correct pattern of triangle circle square circle.		Concept
May show evidence of indicating the correct grouping in the original sequence by circling, counting, marking, etc.		Strategy
Draws a square on the line and chooses only choice c.		Accuracy
Task 5		
Gives a correct reason why 8 pencils cost 16 cents.		Concept
May extend the table to 8 pencils to continue the pattern; may show evidence of counting by 2s; may show evidence of repeated addition of 2.		Strategy
May show counting by 2s, or even numbers, or repeated addition of 2s, or multiplication by 2.		Explanation
Completes table with 8 and 10 and answers 16 cents for 8 pencils.		Accuracy
Task 6		
Shows evidence of understanding that row 5 will have 5 big and 4 small rectangles.		Concept
May attempt to draw boxes in row 5; may show evidence of adding 1 to the large boxes and adding 1 to the small boxes.		Strategy
Explains that Ben is not correct because row 5 will have 5 big and 4 small rectangles, or because there is always 1 more big rectangle than small rectangle in each row.		Explanation
Answers no and nothing else.		Accuracy
