

FOR IMMEDIATE RELEASE

Sustainable Residential Landscape Design Workshops

A Tennessee State University Cooperative Extension Event

Sustainable residential landscape design is all about savings and benefits. Save time, money, the environment. Sustainable landscapes benefit homeowners in many ways including less maintenance, less water consumption, and a healthier more attractive, enjoyable landscape.

Workshops in the Sustainable Residential Landscape Design series will provide information on how you can create a sustainable landscape design for your home. We will cover sustainable plants, water harvesting, edible gardening, butterfly gardens, plants for energy reduction, rain gardens and sustainable grading and drainage.

Tennessee State University Cooperative Extension is offering a series of spring workshops on sustainable residential landscape design for TSU students, staff and faculty, and the community at large. Workshops will be held in the new Landscape Design Studio, room 121 at Farrell Westbrook Hall (Barn) on 4 consecutive Fridays including March 16th, March 23rd, March 30th, and April 6th from 12:00 noon until 1:00 pm. Only 24 places are available at each workshop. There is a \$10.00 registration fee for non-TSU attendees.

To register please contact Ms. Linda Buchanan at 615-963-1827 or e-mail lbuchanan6@tnstate.edu. Please contact Dr. George Smith at 615-963-1233 or email gsmith6@tnstate.edu if you have questions.
